

BOUNTIFUL FARMS

Lakeville, MA

BOUNTIFUL FARMS CASE STUDY

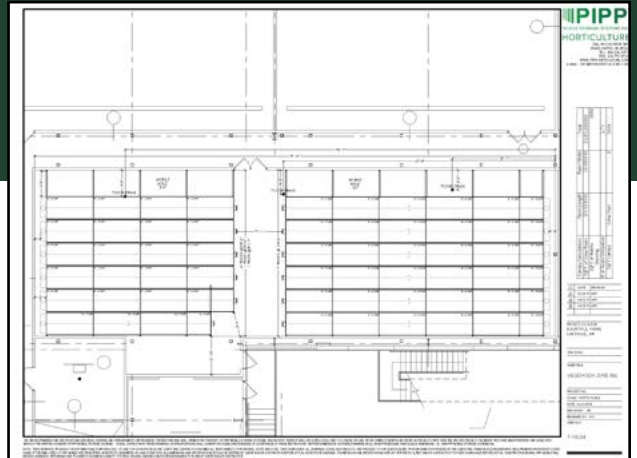

ABOUT BOUNTIFUL FARMS

Bountiful Farms is devoted to making diverse, high-quality cannabis products available to all eligible patients, clients, and caregivers. Their stunningly clean facility and wellness-based approach are led by an award-winning grower with more than 10-years of experience in the business. They are located in beautiful Lakeville, Massachusetts, 40 miles south of Boston and 30 miles east of Providence, Rhode Island. "As part of the community, we will provide the best medical cannabis option for not only patients in southeast Massachusetts but the whole state."

PLANNING

When Bountiful Farms approached Pipp Horticulture, the team was looking to increase their cannabis production without sacrificing the quality of their product.

Pipp worked together with Greenhaus Industries, Fluence Bioengineering and Vertical Air Solutions to create a vertical grow operation that streamlined processes and increased canopy.

THE PROBLEM

GROW vertically to increase canopy without a new building

MINIMAL CANOPY
with only 700 ft of canopy space

INCREASE EFFICIENCY
from current system and processes

@PippHorticulture    

Elevate. Cultivate. Grow.

THE SOLUTION

Combining Pipp Horticulture, Fluence Bioengineering and Vertical Air Solutions created a superior vertical integration. With the fluidity and the quality of Pipp Horticulture mobile vertical racks, Bountiful Farms is able to house **OVER 6,000 CANNABIS PLANTS** in a space that is now over 3,500 square feet. Utilizing our Nesting Drying Racks, the team at Bountiful Farms is also able to accommodate 50-75 plants per rack during harvest.

THE BENEFITS

HIGHER YIELD with less overhead cost

INCREASED PLANT HARVEST 30% by using Pipp's Nesting Drying Racks

SQFT INCREASED 400% in total

"In order to be synonymous with quality, we had to pick [Pipp's] superior quality products. We went with Greenhaus inserts as well as Greenhaus Trays, and we couldn't be happier with the product."

ZACHARY TAYLOR, *Manager of Cultivation*
