

BUCKEYE RELIEF

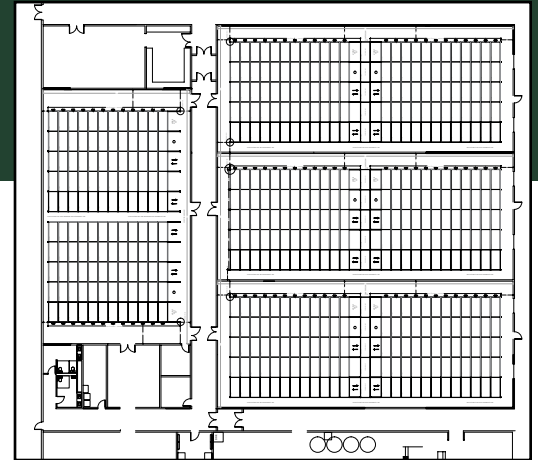

PIPP HORTICULTURE

# BUCKEYE RELIEF CASE STUDY

## ABOUT BUCKEYE RELIEF

Buckeye Relief was founded in 2016 and has been instrumental in the development of Ohio's medical marijuana industry from the beginning. The co-founders of Buckeye Relief became advocates for safe access to medical marijuana after each witnessing loved ones find cancer pain relief above and beyond what traditional treatment could provide.

## PLANNING

Buckeye Relief wanted to achieve several goals. They wanted a system that they could expand as their staff learned to work with growing cannabis and as the market grows. They wanted a system that would maximize the amount of canopy space they have available to them. They wanted to be able to achieve this with minimal additional construction and disruption to their crops.

Pipp Horticulture worked with Buckeye Relief to design a mobile vertical racking system that would start with a single level and have everything already in place to add an additional level of trays once they are ready to expand. Their racking is equipped with all of the other necessary multi-level configuration components, like irrigation and lighting, making it ready for the phase 2 second level build-out.

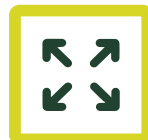

## THE PROBLEM

**EXPANDING** the facility as the business grows

ensure a high level of **BIO-SECURITY** for an inside facility

**MAXIMIZE** the canopy in a set amount of square footage

# Elevate. Cultivate. Grow.

## THE SOLUTION

Pipp Horticulture provided Buckeye Relief with a racking system that beautifully accommodates their two-phase plan. They are starting off with a single level, mobile grow rack system equipped with our patent-pending Drip-To-Drain Trays. This system is pre-equipped to convert to a multi-level mobile cultivation system. Their single-level setup already maximizes floor space by using our Mechanical-Assist Mobile Carriages, which eliminate fixed aisles and create a single movable aisle, and once Buckeye Relief is ready to add their second level, they will be able to **DOUBLE THEIR CANOPY SPACE WITH LITTLE TO NO ADDITIONAL CONSTRUCTION.**

## THE BENEFITS

**DESIGNED** to start with a single level; ready for fast and easy addition of a second level at any time

**MINIMIZE BIO-SECURITY RISKS** with fungal resistant and anti-microbial powder coated aluminum

**MAXIMIZE POTENTIAL CANOPY** size within a static amount of square footage

“We didn’t want to cut corners when it came to any of the equipment in our facility, so we went with the Pipp Mobile Racking. It’s got antimicrobial paint and top of the line—very purpose-built, specifically for this application.”

**JEREMY SCHECTER**, *Cultivation Technology Director Buckeye Relief*
