

HORTICULTURE

WITH GROWGLIDE® INNOVATIONS

SINGLE-LEVEL ROLLING BENCHES

Layout & Design

We will prepare detailed room drawings and elevations, which include calculations of capacity gain of grow space.

Consultation

Our sales support and experienced Cannabis Operators are available to provide partners with unparalleled support.

Installation

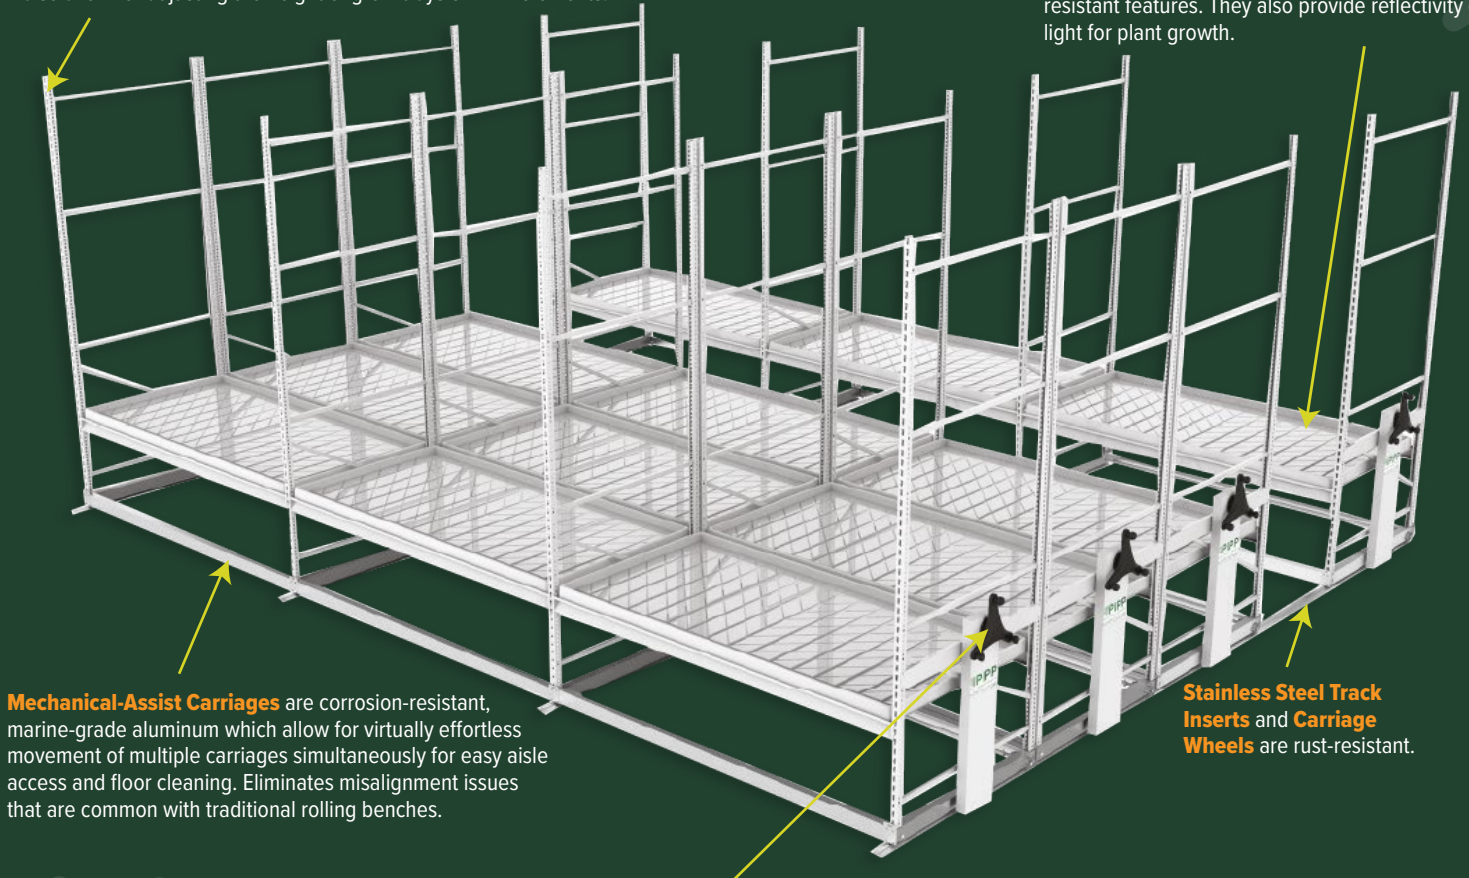

We have a network of certified, licensed installers that are skilled at installing our products fast and efficiently.

PREMIUM ROLLING BENCHES

Premium Rolling Benches are the most versatile solution in the Pipp family of movable grow systems. This system is designed to accommodate the ability to easily add additional grow levels in the future in a phased build-out approach, as your facility becomes ready to expand.

6' High or Taller White Bulk Rack Uprights are constructed of high strength steel with a white powder coat finish, which is UV-stable and contains anti-microbial and fungal-resistant additives. Trellising and lighting equipment can easily be attached to the uprights. The uprights also allow for adjusting the height of grow trays on 2" increments.

White ABS Grow Trays are designed with a built-in slope and can be removed individually for easy cleaning and changing. These trays are thermoformed with a co-extruded acrylic cap to provide UV-stable, anti-microbial and fungal-resistant features. They also provide reflectivity of light for plant growth.

Mechanical-Assist Carriages are corrosion-resistant, marine-grade aluminum which allow for virtually effortless movement of multiple carriages simultaneously for easy aisle access and floor cleaning. Eliminates misalignment issues that are common with traditional rolling benches.

Stainless Steel Track Inserts and Carriage Wheels are rust-resistant.

3-Prong Handle is ergonomically designed and easily accessible, rather than reaching under the rolling bench for a handle. The 3-prong handle creates easy carriage movement by offering comfortable maneuverability from 3 positions. These handles are equipped with a push-button aisle safety locks with identifiable red/green indicators.

System Advantages

- Slope built into the ABS trays.
- No gluing of seams or risk of leaks.
- Tray removal for easy cleaning.
- Provides larger working aisles.
- No more misalignment of carriages.
- Positional handle locks eliminate drifting.
- Multiple carriage movement for easy aisle access.
- No bending over to reach handles under benches.
- Uprights are used for trellising and light attachment.
- Ability to add multi-level in the future.

Lead Time

Current lead times are extended due to market conditions. However, we still maintain industry competitive lead times.

Installation Services

Pipp has a network of **certified, licensed installers** that are skilled at installing products fast and efficiently. We can assign a team for any size project and schedule them according to your project needs.

Warranties

- Pipp Horticulture's **Carriage and Vertical Grow Racks** are warrantied for **five years** to the original purchaser. Due to high humidity in the grow environment, some tarnishing, oxidation, and metal decomposition is expected. These blemishes are cosmetic and don't qualify for replacement under the warranty.
- **Thermoform ABS Trays** carry a **one year** warranty.
- **All Pipp installations** are warrantied for **one year** from the date of the original installation for labor on replacement parts.
